Professional Summary

Currently a Supportability Engineer for GitHub Copilot, serving as the link between customers, Support, and Engineering. I escalate high-impact customer issues, identified through support ticket volume, to the Engineering, Product, and Design teams to clarify current blockers and drive resolution. I also advocate for Support by developing tooling and documentation that enable the team to work effectively with the product, including custom agents, skills, dashboards, and documentation that address support issues. My prior background in education allows me to make complex concepts accessible, helping teams apply them in practice. I hold multiple industry certifications and credentials, including GitHub Copilot Certified.

Experience

GitHub – Supportability Engineer (Copilot Product) | Feb 2026 – Present

- Create agentic workflows: Deploy workflows that streamline repetitive tasks and improve efficiency.
- Build custom Copilot agents and skills: Design and train personalized agents for supportability workflows; create reusable skills to reduce administrative toil.
- Reduce support ticket volume: Use automation to resolve issues identified as permanently blocked.
- Coordinate major release support: Organize support events, documentation, and enablement for releases, including Universe.
- Develop KQL/ADX executive dashboards: Highlight emerging customer pain points and support ticket volume trends.
- Partner with Engineering on customer issues: Triage issues and secure fixes for emerging and long-standing customer pain points.
- Partner with Copilot Squad SMEs: Validate root causes and translate pain points into engineering action items that resolve customer problems.
- Develop internal support tooling: Launch a production-ready app that helps Support Engineers route high-severity issues to the appropriate teams.
- Create a critical feedback framework: Establish an internal escalation framework for critical customer feedback.
- Package reusable solutions: Write parameterized queries and automation patterns adopted by other pillars.
- Deliver recurring triage and executive outputs: Lead bi-monthly triage meetings; produce executive briefings, monthly business review slides and presentation materials, and data-backed recommendations.
- Define Supportability Engineering processes: Help establish processes for the Supportability Engineering team.
- Establish cross-functional communication: Build communication channels at multiple levels across the organization.
- Enable Support Engineers: Present new processes and workflows at Support Town Halls.

GitHub – Customer Reliability Engineer III | Dec 2024 – Feb 2026

- Embedded with Premium Plus enterprise clients; provided consultative support, direct troubleshooting, and authored runbooks
- Led AI adoption initiative across CRE team
- Built UAT modules and tooling used to validate the team's moda app
- Earned GitHub Copilot, Actions, Administration, GHAS, and Foundations certifications

Apollo GraphQL – Senior Support Engineer | Apr 2024 – Dec 2024

- Built custom integration code (Kotlin, React, GraphQL) to migrate ticketing from Zendesk to Jira Service Management—a reusable pattern adopted org-wide
- Designed scalable Confluence Knowledge Base architecture serving as a template for other teams Partnered
- with enterprise clients and non-engineering teams to diagnose issues and document cross-functional processes

LogicMonitor – Senior/Premier Support Engineer | Nov 2021 – Apr 2024

- Primary technical contact for enterprise customers; turned one-off solutions into repeatable bestpractice playbooks
- Delivered quarterly environment reviews; maintained knowledge base documentation
- Designed and delivered training programs for new hires and existing team members

Wipro @ Facebook – Test Engineer / Senior Project Engineer | Jul 2020 – Nov 2021

- Built onboarding documentation and team wiki resources using Markdown; provided QA by grading support tickets
- Developed scalable training assets adopted across multiple teams

---

Skills

AI & Automation: GitHub Copilot (certified), prompt engineering, agent design, CLI-assisted workflows, identifying patterns that need workflow automation

Languages & Frameworks: Python, JavaScript, Java/Kotlin, HTML/CSS, GraphQL, REST APIs, Markdown

DevOps & Cloud: Git/GitHub (advanced), CLI proficiency, Agile SDLC, AWS, Kubernetes

Tools & Platforms: VS Code, Zendesk, Jira, Confluence, Salesforce, Totango, Microsoft Teams

Certifications

GitHub Copilot • GitHub Actions • GitHub Administration • GitHub Foundations • AWS Certified Cloud Practitioner • KCNA (Kubernetes & Cloud Native Associate) • CompTIA Linux+ • PMI Certified Associate in Project Management (CAPM)

Education

AAS, Computer Programming – Austin Community College | **MA, English** – National University, La Jolla, CA | **BA, English** – University of Texas, Austin
